3.1 Appearance
There shall be no such defects as deep scratch, crack, rust, discoloration or leakage, which may adversely affect the commercial value of the cell.

3.2 Dimension
Diameter: \(18.29 \pm 0.11\) mm, \(A\) (Max. \(18.40\) mm)

4. Performance Specification

4.1 Standard test condition

4.1.1 Standard Charge
Unless otherwise specified, "Standard Charge" shall consist of charging at constant current of 0.5C. The cell shall then be charged at constant voltage of 4.30V while tapering the charge current. Charging shall be terminated when the charging current has tapered to 50mA. For test purposes, charging shall be performed at \(23^\circ\)C ± 2°C.

4.1.2 Standard Discharge
“Standard Discharge” shall consist of discharging at a constant current of 0.2C to 3.0V. Discharging is to be performed at 23 °C ± 2 °C unless otherwise noted (such as capacity versus temperature).

### 4.1.3 Fast Charge / discharge condition
Cells shall be charged at constant current of 0.5C to 4.30V with end current of 50mA. Cells shall be discharged at constant current of 0.5C to 3.0V. Cells are to rest 10 minutes after charge and 20 minutes after discharge.

This charge / discharge cycle shall be repeated three times to measure the recovery capacity.
### 4.3.3 High Temperature and High Humidity Test

Cells are charged per 4.1.1 and stored at 60°C (95% RH) for 168 hours. After test, cells are discharged per 4.1.2 and cycled per 4.1.3 for 3 cycles to obtain recovered capacity. No leakage, No rust. Capacity recovery rate $\geq 80\%$.

#### 4.3.4 Thermal Shock Test

65°C (8h) $\leftrightarrow$ 3hrs $\rightarrow$ -20°C (8h) for 8 cycles with cells charged per 4.1.1. After test, cells are discharged per 4.1.2 and cycled per 4.1.3 for 3 cycles to obtain recovered capacity. No leakage. Capacity recovery rate $\geq 80\%$.

### 4.3.5 Temperature Dependency of Capacity
