IMPORTANT SAFETY RETURN BATTERIES INSTRUCTIONS

One of the major risks associated with the transport of batteries and battery-powered equipment is short-circuit of the battery as a result of the battery terminals coming into contact with other batteries, metal objects, or conductive surfaces. Packaged batteries or cells must be separated in a way to prevent short circuits and damage to terminals. They must be packed in a strong outer packaging.

All cells and batteries have been damaged that have the potential of producing a dangerous evolution of heat, fire, or short circuit may be transported by highway, rail or vessel only.

1. Each cell or battery must be placed in individual, non-metallic inner packaging that completely encloses the cell or battery.
2. The inner packaging must be surrounded by cushioning material that is non-combustible, non-conductive, and absorbent.

Not Allowed to Ship
