MATERIAL SAFETY DATA SHEET

Date: Apr/27/2009

1. Identification of the substance/preparation and of the company/undertaking

Identification of the product
Product name: Lithium Iron Phosphate Battery (LiFePO4, LFE)
Chemical System: Lithium ion
Model: Cylindrical and Prismatic Type Cells
Designated for RECHARGE? X Yes __ No

Manufacturer/supplier identification Company: AA Portable Power Corp
Contact for information: 860S 19th St, Unit A, Richmond, CA, 94804, USA
Emergency telephone No.: 510-525-4710

2. Composition/information on ingredients

Weight of metallic lithium per cell: 0g. There is no metallic lithium in the lithium ion battery.

3. Hazards identification

Health Hazards (Acute and Chronic):
For the battery cell, chemical materials are stored in a hermetically sealed can, designed to withstand temperatures and pressures encountered during normal use. As a result, during normal use, there is no physical danger of ignition or explosion and chemical danger of hazardous materials leakage.

However, if exposed to a fire, added mechanical shocks, decomposed, or added electric stress by misuse the cell case will be breached and hazardous materials may be released. Moreover, if heated strongly by the surrounding fire, acrid gas may be emitted.

Carcinogenicity:
NTP: None IARC Monograph: None OSHA Regulated: None

Medical Conditions Generally Aggravated by Exposure:
An acute exposure will not generally aggravate any medical condition.
Human health effects:
Inhalation: The steam of the electrolyte has an anesthesia action and stimulates a respiratory tract.
Skin contact: The steam of the electrolyte stimulates a skin. The electrolyte skin contact causes a sore and the stimulation on the skin.
Eye contact: The steam of the electrolyte stimulates eyes. The electrolyte eye contact causes a sore and the stimulation on the eye. Inflammation of the eyes may occur.

Environmental effects:
Since a battery cell remains in the environment, do not throw it out into the environment.

Specific hazards:
If the electrolyte contacts with water, it may generate detrimental hydrogen fluoride. Since the leaked electrolyte is inflammable liquid, do not bring close to fire.

<tbody>
<tr>
<td>Specific control parameter :</td>
</tr>
<tr>
<td>Personal protective equipment :</td>
</tr>
</tbody>
</table>
Respiratory protection (Specify Type): Not necessary under conditions of normal use.
Ventilation: Not necessary under conditions of normal use.
Protective Gloves: Not necessary under conditions of normal use.
Eye protection: Not necessary under conditions of normal use.
Other Protective (Clothing or Equipment): Not necessary under conditions of normal use.

9. Physical and chemical properties

Appearance
  Physical state: Solid
  Form: Cylindrical
  Color: Metallic color
  Odor: No odor

PH N/A
Specific temperatures Temperature ranges changes in physical state occur.
Flash point N/A
Explosion properties N/A
Density N/A
Solubility with indication of the solvent(s): Insoluble in water

10. Stability and reactivity

Stability: Stable
Conditions to Avoid: When cell is exposed to an external short-circuit, crushes, deformation, high temperature above 100 degree C, it will cause heat generation and ignition. Avoid direct sunlight and high humidity.

Hazardous Decomposition or By-products:
  Acrid or harmful gas is emitted during fire.

Materials to avoid: Conductive materials, water, seawater, strong oxidizers and strong acids.

Hazardous polymerization will not occur.

11. Toxicological information

Acute toxicity :
  Copper 60-100mg sized coarse particulate causes a gastrointestinal disturbance with nausea and inflammation. TDLo, hypodermic - Rabbit 375mg/kg
  Organic electrolyte LD50, oral - Rat 2,000mg/kg or more

Further toxicological information :
  Aluminum By the long-term inhalation of coarse particulate or fume, it is possible to cause lung damage (aluminum lungs).
  Graphite Long-term inhalation of high levels of graphite coarse particulate may cause lung disease or a tracheal disease.
12. Ecological information

Ecotoxic effects: N/A
Further ecological data: N/A

13. Disposal considerations

AA Portable Power encourages battery recycling. Our Li-ion batteries are recyclable through the Rechargeable Battery Recycling Corporation’s (RBRC) Charge Up to Recycle! Program. For information call 1-800-8-BATTERY or see their website at www.rbrc.org. Li-ion batteries must be handled in accordance with all applicable state and federal laws and regulations.

DO NOT INCINERATE or subject battery cells to temperatures in excess of 212° F. Such treatment can vaporize the liquid electrolyte causing cell rupture. Do not use in combination with fresh and used lithium batteries neither with other type of battery.

14. Transport information

International transport regulations
1. International Air Transport Association (IATA) pursuant to P1 965 Part 1.
4. U.S. hazardous materials regulations pursuant to 49 CFR 173.185 and Special Provision 188.

UN-No.: 3480
IATA Packaging Instruction 965 Part 1

AA Portable Power Li-ion cells contain no metallic lithium and pass the tests defined in UN model regulation section 38.3.

If AA Portable Power Li-ion cells are used to construct battery packs, the assembler of that pack is responsible to ensure the battery has been tested in accordance with the requirements contained in the UN Model Regulations, Manual of Test and Criteria. Part III, subsection 38.3.

15. Regulatory information

N/A

16. Other information

Make people: Professional post: R&D Engineer Name(sign): Louis Chu
Make unit: Name: R&D Department Phone: 510-525-4710
